## WORK EXPERIENCE

### FRONT-END ENGINEER

#### *West Monroe*

Aug 2021 - Current

- Worked with advanced web development technologies like React, Redux, Typescript, Next, Node and SQL for fortune 500 clients.
- Built single page React apps from the ground up following UX design/flow making changes along the way per client frequent reconsiderations.
- Developed design and implemented user interfaces and highly reusable UI components using React for both web and mobile.
- Designed highly-customized and scalable styled elements using raw CSS along with animations.

### FRONT-END ENGINEER

#### *Snazzy Craftwork*

Jun 2022 - Sep 2022

- Successfully developed and launched a platform part of grid.life for drivers to manage their information and register for racing events which is currently being used by thousands of users/drivers.
- Built a fast React application with Next.js and tests with Cypress to ensure app and features ran successfully.
- Setup Mailchimp API to deliver newsletters to drivers about upcoming race events and to let grid.life know who registered for those events.

### TECH SUPPORT AGENT

#### *Harte Hanks*

Sep 2019 - Feb 2021

- Develop troubleshooting procedures to help both support personnel and end users interact properly with hardware and software.
- Logging information about the correspondence into the company's system to keep a record of actions.

## PROJECT SHOWCASE

### Gridlife Club 🔗

July 2022

- Platform for drivers to register their information, vehicles, etc. allowing them to also register for race events.

Tech: React, Next, SASS, Firebase, REST APIs

### NYTimes Bestseller 🔗

Mar 2022

- Using the NYTimes API to manipulate data with ReactJS and styling with Styled-Components.

Features: Pagination, cache, search/checkbox filtering, sorting, and carousels.
