PROFILE

I've always been driven by technology and it's potential, and software engineering is a field that pushes me to bring that potential out. With my past experience, multitasking, time management, and great detail work is where I thrive the most. My greatest achievements are the projects I've built which are an image of my abilities, uniqueness and proficiency so I take a lot of honor in them. I am beyond thrilled to be starting in a field where I'll be doing what I love.

PROJECTS

Spamazon 🔗

- An e-commerce app with features like CRUD, authentication, and full cart functionality including a mock purchase.
- Used: React (class comp), Javascript, PSQL, Python, Django, HTML, CSS, and full authentication with Firebase.

Reviewt 🔗

- Created an app with the idea of having users post reviews on their most favorite (or hateful) products.
- Used: Javascript, JQuery, EJS, HTML, CSS, MongoDB, Mongoose, Express, and full authentication with express session and bcrypt.

myHome 🔗

- A realtor app where you can find, as well as list, homes in the southern states
- Used: React (functional comp), Javascript, MongoDB, Express, HTML, CSS, and full authentication with JWT and Bcrypt.
